- Java
- HTML5 & CSS3
- Javascript,CreateJS
- Android Development
- Back-End with Firebase

INTERESTS

- Android ROM development.
- Artificial Intelligence.
- Machine Learning.
- Ethical Hacking.
- IOS App Development.

PROJECTS

Pocket Tank game

- This is a multiplayer web-browser game with chat application made by me as it was my favourite game in childhood so i had motivated by myself to build that game instead of playing that game in Android / IOS i implemented in my web browser using technologies specified below .
- HTML5, CSS3, Javascript, Create JS, Fire Base.

ARM Simulator

- As my stream is Computer Science and Engineering i should be much influenced on thinking Why ? Where ? and How? for each and every real life situations based on technology.
- So I implemented a simulator using C++ with and without Pipeline.

IIT JAMMU Android App

- I am presently working on our college app as i was much interested in achieving Associate Android Developer Certification from Google i dumped into this technology after gaining some basic knowledge i started making this app to get some confidence on my learning process.

AC Circuit Solver

- This project was handled for me as my assignment in our college in which i have to implement a circuit in webbrowser in which you can draw and solve the circuit with specified Spice Netlist input format and i implemented this assignment using C++.

Car Interior Light Controller

- It is simply a three way switch implemented by the logic of Gates in Digital Logic and System Design, It is same as the interior light working process in any present car technologies.

Bouncing Balls Screen Saver Application

- This project was also handled for me as my assignment in our college in which i have to implement a Screen Saver application on Desktop using Technologies C++ using Open GL library.

**HrushikeshVetagiri.github.io

- I designed a portfolio for my batchmate using technologies HTML5, CSS3, Javascript, Bootstrap.
